0035 1 FACILITY: DECnet-VAX V2.0 Network Management Listener
0036 1
0037 1 ABSTRACT:
0038 1
0039 1     This module contains routines for processing the NCP SHOW and LIST
0040 1     LOGGING commands.
0041 1
0042 1 ENVIRONMENT: VAX/VMS Operating System
0043 1
0044 1 AUTHOR: Distributed Systems Software Engineering
0045 1
0046 1 CREATION DATE: 30-DEC-1979
0047 1
0048 1 MODIFIED BY:
0049 1
0050 1     V03-007 MKP0013      Kathy Perko      12-April-1984
0051 1     Add area 1 fix to nodes displayed in logging databases.
0052 1
0053 1     V03-006 MKP0012      Kathy Perko      21-Mar-1984
0054 1     Don't open permanent database if it's not a permanent database
0055 1     operation.
0056 1
0057 1     V03-006 MKP0011      Kathy Perko      5-Aug-1983
```

```
58      0058 1 | Convert node permanent database to multiple ISAM keys to make it
59      0059 1 | faster.
60      0060 1 |
61      0061 1 | V03-006 MKP0010 Kathy Perko 23-Nov-1982
62      0062 1 | Add module as a source for events.
63      0063 1 |
64      0064 1 | V03-005 MKP0009 Kathy Perko 18-Oct-1982
65      0065 1 | Leave permanent database files open until LIST command is
66      0066 1 | finished. This avoids opening and closing files (notably
67      0067 1 | the node file for LIST KNOWN LOGGING) several times.
68      0068 1 |
69      0069 1 | V03-004 MKP0008 Kathy Perko 12-Oct-1982
70      0070 1 | Report logging events even if executor address is zero.
71      0071 1 | This allows events to come out for nodes with only PSI.
72      0072 1 |
73      0073 1 | V03-003 MKP0007 Kathy Perko 20-Sept-1982
74      0074 1 | Redesign the logging database so that, when the executor
75      0075 1 | node is the sink node, it is stored with a node address of
76      0076 1 | zero. LIST LOGGING translates this to the real address of
77      0077 1 | the executor node. Storing the executor node address this
78      0078 1 | way allows the logging data base to be transportable to other
79      0079 1 | nodes.
80      0080 1 |
81      0081 1 | V03-002 MKP0006 Kathy Perko 10-July-1982
82      0082 1 | Expand NML$GET_ENTITY_IDS to get entity's with qualifiers.
83      0083 1 |
84      0084 1 | V03-001 MKP0005 Kathy Perko 22-May-1982
85      0085 1 | Change NETACP Q10 interface to double search key and
86      0086 1 | add X-25 stuff.
87      0087 1 |
88      0088 1 | V02-004 MKP0004 Kathy Perko 01-Dec-1981
89      0089 1 | Supply P3 parameter for calls to NML$NETQ10 so that
90      0090 1 | debug logging only dumps pertinent contents of P4 buffer.
91      0091 1 |
92      0092 1 | V02-003 MKP0003 Kathy Perko 28-Nov-1981
93      0093 1 | Fix read summary and events for the executor so
94      0094 1 | that the parameters are returned in numerical order.
95      0095 1 |
96      0096 1 | V02-002 MKP0002 Kathy Perko 16-Nov-1981
97      0097 1 | Add circuits to logging source ids.
98      0098 1 |
99      0099 1 | V02-001 MKP0001 Kathy Perko 24-July-1981
100     0100 1 | Change parameters in call to NML$GET_ENTITY_IDS for
101     0101 1 | new Q10 interface to NETACP.
102     0102 1 |
103     0103 1 |
